

KUKKO-SPECIAL

The No.1 – the first cooperation set of the companies

Wera

KS-2030-1+S/8000A

BRANDNEW!

The brand-new cooperation set of the company **Wera** with **KUKKO** convinces with a combination of the well-tried proof puller set **KS-2030-1+S** and the excellent Zyklop ratchet of the company **Wera**.

This arrangement was not available at the market until today. The Zyklop ratchet is in comparison with other conventional ratchets a real quick turner.

You can use the ratchet in the 0° position as a conventional screwdriver.

The ratchet head is freely pivotable and can be placed with the slide switch into five positions.

You can easily work in narrow or hardly to be reached installation situations.

The Zyklop ratchet will be simply switched in every position with the scuffle wheel into left or right-hand operation.

0°-position

conventionally

We have improved our arms for the confined spaces!

- even more slimmer, but with broader seat
- even more loadable
- spare part number and the brandname KUKKO moulded in the hook
- sliding block will be aligned exactly around the hook foot

S-hook from 2010

KUKKO-SPECIAL

Combination set

KS-2030-1+S/8000A

For combining of 2 pullers plus Zyklop

The extremely small hooks are particularly suited for confined spaced and hard accessible places. The **Quick adjust technology** allows a quick detaching and sliding without spanner.
